Education

National Institute of Technology, Warangal
B.Tech in Electronics and Communication

2016 – 2020
CGPA: 7.79

Experience

Microsoft

Software Engineer II

Hyderabad

May 2025 – Current

- Re-architected the application to enable seamless, deployment-free onboarding of new clients, significantly reducing rollout time and operational overhead.
- Spearheaded AI agent-driven development initiatives; generated automated test suites using AI, substantially reducing regression testing effort and cycle time.
- Integrated AI agents with project management tools and GitHub to enable end-to-end autonomous task execution, improving development velocity and workflow efficiency.
- Designed and implemented bulk file upload functionality supporting up to 20k records per batch for create, update, and delete operations, enabling high-volume data processing.

Arcesium

Senior Software Engineer

Hyderabad

May 2022 – May 2025

- Led development of a secure application for encrypted storage and retrieval of sensitive data and files, serving 10+ internal clients using AWS S3, AWS KMS, and REST APIs.
- Migrated an application to event-driven architecture with KEDA, reducing server costs by 60% using dynamic scaling.
- Enabled real-time search on PII data across 10M+ records using Lucene Index, while maintaining data confidentiality.
- Optimized database performance, achieving 70% faster query execution times by redesigning indexes and refining multiple queries.
- Authored automation tests in Python and contributed to more than 60% of the application's automation test coverage.

Wells Fargo

Software Engineer

Hyderabad

Jan 2021 – Apr 2022

- Delivered a fully functional Java Spring application to automate daily foreign exchange trade reporting.
- Automated batch job failure monitoring by developing a Java application, saving 2 hours of daily manual work and increasing operational efficiency.
- Improved application security by implementing Spring Security and resolving a severity-2 vulnerability.
- Built a React-based web application for CMaaS, reducing configuration time across environments from hours to minutes.

Enliven Solutions Pvt Ltd

Software Engineer

Freelance

Oct 2020 – Jan 2021

- Built a responsive user interface from scratch for Resolab, a resource management application, enhancing usability and design aesthetics.

Samsung R&D Institute

Software Engineer Intern

Bangalore

May 2019 – July 2019

- Developed a program to analyze user activity patterns within the Samsung Pay Android application, identifying the most frequently used features to improve user experience.

Skills

Languages: Java, Kotlin, C++, Python, SQL, JavaScript, HTML, CSS

Libraries and Frameworks: Spring Boot, MyBatis, Hazelcast, Lucene, Elasticsearch, React.js, Material UI

Tools and Technologies: AWS, Azure, Kafka, Docker, Kubernetes, Terraform, Maven, Gradle, Linux, GitHub, JMeter

Positions

ACM Student Chapter

NIT Warangal

- Organized coding contests and sessions, mentoring juniors to enhance their programming skills and problem-solving abilities
